BEASTIALITY STORIES

Part One

I had spent all morning interviewing micro neurology graduates to assist in decoding brain waves to control computers rather than using a keyboard and mouse. I thought I would whittle it down to two or three candidates. But the only suitable person was a fairly plain girl, about 23, who probably had a fairly good figure if she didn't wear such ill-fitting clothes. Her name was Sue, and she seemed very shy.

After a couple of weeks, we started to get on well enough, and she was very good at what I needed her to do. After two months we had a prototype which stuck on the back of the neck with a couple of Elastoplast. It consisted of very fine wires that just pierced the skin hooked up to a small computer chip. It felt a bit sore to start then the device emitted a pain-blocking signal. We connected it to the computer, and after a week of decoding our brain waves, we could type by using our thoughts. It only did lowercase letters, no numbers, and no punctuation. At best, it was about as fast as a slow typist.

We tried to think of other uses for it.

What if we made two and see if we could communicate with each other.

How would we decide who transmitted and who received.

We could have a wristband that you press to talk.

Ok, we would need to set them both to receive and analyze the waveforms first.

After a hectic week, we had two prototypes. These had Velcro wrist bands and a large wound dressing to hold the chip on the back of the neck.

We started analyzing the waveforms. We started by sticking a sharp object in our hands to find the pain signals. We found we could increase or decrease these from the slightest touch being agony to a quite serious pin prick not registering at all.

Alongside the pain waves, we found the triggers for anger. We wound Sues up too high, and I told her to slap me. She seemed to enjoy that. My anger signals shot through the roof. I wound pain and anger down as far as they would go, and we did it again. I felt no pain and no animosity. We made the assumption Sues would be the same. I didn't want to hit her.

Over that week, we found an assortment of signals that were the same for Sue and me. I'm not sure what all of these did. Then, we found the triggers for Reluctance and Inhibition.

While Ben sorted out the software for the chips, I made the wristbands. I added sliders to control any four signals. The computer would set which signals they controlled.

We decided that one slider would return everything to normal, one would cover inhibition, and the third would cover one of the unknown signals.

We put on the neck bands and switched them on, then strapped on the wrist bands. As they booted up, there was a small buzz in the back of the neck. Okay, turn the reset slider to off and turn the other two to ten percent. It felt a bit strange. As Sue's head turned from left to right, I could feel signals change.

I started talking to Ben, but he seemed to know what I would say a fraction of a second before he said it. This was weird.

OK, turn the reset on.

It seems we were feeling the same effect.

OK Sue, you are a very shy person normally, aren't you? If I asked you to strip naked, you wouldn't do it, would you?

NO, definitely not.

Would you be prepared to turn your inhibition up to see how that works slowly.

You want me to keep turning my inhibition signal up until I strip naked for you.

It's just you and me. I want you to try your hardest not to do it. When you start removing your clothes, I will stop.

I don't know. I don't really feel comfortable doing it.

That's the whole point. If you asked me to strip naked I would without the inhibitor. We need to try something you wouldn't normally do.

OK then but you strip off first I don't want to end up stood there naked on my own.

I couldn't believe Ben was getting naked. Wow his penis is quite large. I hadn't seen one since I was about sixteen. I have led a very sheltered life.

OK turning it to twenty percent.

I tried to send a signal for sue to strip. Nothing.

I kept winding it up until I got to sixty percent. I don't know why but I started removing my top, then my skirt I was stood there in just my bra and knickers. I wouldn't go further.

Ok reset. How did that feel. Weird I just didn't mind stripping but that's as far as I wanted to go. I see you enjoyed it. Staring at his erection.

Woops sorry.

That's ok it's massive.

No it's about eight inches that's about average. Ok do you want to get dressed or try a bit further.

Lets just check the waveforms then we will continue. I couldn't believe I was sat in my bra and pants next to a naked man checking waveforms. That's strange my inhibition levels have not returned to normal yet.

That's ok we will check the decay levels when we are done.

We returned to where we were at sixty percent. Ok seventy percent. Then Ben signalled me to strip again. Not sure how this worked. I knew Ben wanted me to strip but I wouldn't do it till I received the signal from him. I quickly removed my bra. As I removed my bra the signal from Ben got

stronger. I could see his dick twitching. Then I removed my knickers. I was stood there completely naked and I didnt care. This is something I would never normally do.

Ben got me a chair and signalled me to sit.

Open your legs he signalled.

He reached over and pushed the slider up to eighty percent. As he pushed the slider up so my legs parted.

Ok reset.

Well that was nice. How do you feel

Weird I'm sat here naked with my legs open and I dont care.

You have switched your inhibitor off but I am still sending a signal to open your legs. Try to close them.

Wow thats weird. I can override you but I cant really be bothered.

Would you like me to make you orgasm to check the carrier waves for sex.

I'm trying to say no but you can if you want. Dont put your dick in me or I will be annoyed.

I'm not going to.

Ben reached over and turned off the reset and turned the inhibition to eighty percent again. then he came round behind me and put his arms round me. He cupped my left breast. and with his other hand he started rubbing my clitoris.

How's that.

Nice.

Ben turned the unknown slider to sixty percent and continued with my clit.

Any change.

I dont think so. I slid the slider to ninety percent still nothing. Ben was starting to make me orgasm. I slid the inhibition to one hundred percent. I thought I was going to explode when I orgasmed.

Thats too high. you dont need it that high yet.

Ok reset.

I was still buzzing I think the unknown slider is probably endorphin release.

OK sue. Has anyone ever gone down on you.

What do you mean.

Oral sex. Has a man ever licked you down there.

No why. Do you want to. I would love to.

I had a bit of a fumble with a boyfriend when I was younger but he mostly just fingered me then stuck his dick in me. After that I spent too much time studying to have a boyfriend.

Ben pulled me up from the chair and lay me on the couch with my bum on the edge. He turned the sliders up to eighty percent and climbed between my legs and draped my legs over his shoulders. I couldn't believe how it felt. And the thought that someone wants to lick me down there. Pretty soon he gave me an even stronger orgasm. he then reached over and reset the sliders. Then he reset his.

The loss of connection was strange. All of a sudden I was back in the real world. I was completely naked and a naked man had just given me the most amazing orgasms. This wasn't me at all.

I just want to take a blood sample then we can check the waveforms. I wandered over naked to the lab Bench and put a blood sample in the analyser. It would take a few minutes. Then I went to the laptop to look at the waveforms. They were very complex so I sent them to the printer. Ben was stood behind me cupping my breasts all the time I was at the screen. I was in no hurry to move. It felt quite nice. It was very strange Bens dick was sticking in my back but he had not tried to fuck me.

Do you know you have a beautiful body. We should go and get you some sexier clothes next time we are in town.

It was a good hour before I felt normal again. I still didnt mind being naked. Perhaps my inhibition levels would remain where they are. The blood test came back. It looks like it was endorphins. The bodies own heroin. So we knew what that slider was for.

We disconnected all the gear. packed it all away. I was just going to get dressed and go home when Ben took my hand and led me up to his bedroom. I dont know if it was the change to my brain waves or the endorphins or what but I just followed him. I didnt mind when he carefully lowered me into the bed. He showed me how to 69. That felt really nice. I didnt even care when he ejaculated in my mouth. He turned me round and pulled the covers over us and kissed me.

I woke in the morning not sure where I was. I turned and saw Ben and realised it had not been a dream. I reached down and held his penis which was already rock hard. I carefully climbed astride him and slowly slid his dick inside me. I had managed to give myself an orgasm and collapsed on him before Ben opened his eyes. This was the first real dick I have had inside me.

You're not done yet he said spinning me over and fucking me.

It was another hour before we got up.

You should move in. It would be more convenient for you.

And probably more fun. I realised we would be going a lot further than this before we were done.

The next day I moved my stuff in and handed the keys back to my landlord. We went into town where Ben picked out some new clothes. Then he picked out some underwear for me. Oh my god I'm

not sure I will be able to wear some of it.

We got back to the lab and Ben made me try on all of the clothes. I didnt think twice about stripping in front of him. Pretty soon he had an erection again.

He brought the neck patch and controllers out.

Put these on I need to see what level we need you on today.

You know you can fuck me without.

I know but we need to test it over extended periods.

I put the band on and turned the settings to eighty percent as per yesterday. This seemed way too much and I turned it down to fifty percent. It looks like your base line is up by thirty percent. He then instructed me to lay on the bed and he proceeded to lick me. I quickly orgasmed and quickly followed by two more. He turned the endorphin slider to ten percent and did it again. I had another orgasm but it was a while before I could come again. Well it looks like thats not just endorphin it also changes your recovery time for your orgasms.

Over the next few weeks we split the waveforms down further. The endorphins was close to the orgasm control. and it turned out most of the waveforms had multiple variations. In the end we hooked into food, drink, sleep, toilet , rest, pleasure , pain, sensitivity, submission, domination, inhibition, anger and lust we found that the endorphins could be used to give you an energy boost if any of the settings dropped below a pre-set minimum.

We spent an amazing couple of weeks trying sex at various settings and without the chips. I cant believe I have missed out on all these years of sex.

Once we had got as much data as we could Ben said I am off to the guy who builds the chip. I may be away for a few days.

I was pretty much rattling round the house and lab with nothing to do. Then I wondered if the chip would work on Bens dog. He was a big soft Alsatian called shep. I clipped the hair on the back of his neck and attached Bens control chip and switched it on. The light came on and the fine wires wound into the back of his neck. He started barking then he was fine.

I went to the computer and checked his settings. I told him to eat and to sleep, he did these without any problem. I set his submissive levels at 50. and anger at about 10.

I really enjoyed oral sex and wondered if I could get shep to lick me. I felt really nervous about this so I put my chip on and set my inhibition to full. I set my orgasms to about 2 minutes and my lust to about 50. I was only going to let him lick me for a few minutes to try him out. I removed my jeans and knickers and lay on the settee with my arse on the edge. I didnt know whether to turn my inhibition back down a bit I was actually getting excited.

I put my wrist strap down and put on the one for Bens chip. as it connected I felt the usual buzz but then things felt a bit weird. Obviously sheps waves were slightly different to mine.

I turned sheps lust and domination up a bit. I signalled him lick me. I could see he was a bit confused. I turned his inhibition up and signalled again. then he came over and started licking me. Wow that felt good. as I got excited that fed through to shep and he started licking like a demented dog. within a few seconds I was coming. Shep started lapping at me even faster. Then as he continued I orgasmed every 3 minutes until I was ready to collapse. Then the endorphins kicked in and I started orgasming again and again. I was as high as a kite by now. I knew I couldn't take much more so I pressed the reset button which I had programmed to make him sleep.

Shep pulled away and lay down, within a few seconds he was asleep. I left the collar on him to keep him that way for now. I connected the charger lead to him where he lay. And I removed my chip and put that on charge.

I made myself a coffee and sat down checking the recording of the waveforms and the settings. I was just starting to relax when my endorphins kicked in again. Oh my god I was as high as a kite again. I reset all my settings and set myself to sleep for 2 hours.

When I came round I felt a lot better. I waited a couple of hours to make sure none of my settings kicked in again. Then I set my settings to where they were. I set the maximum number of endorphin shots per hour and the maximum per day. The last thing I wanted was to become addicted.

I planned what I was going to do next.

Part Two

After a good nights sleep I went down to the lab and realised shep was still asleep.

When I saw him laid there I knew I was going to get him to fuck me sooner or later. I woke him up and removed his chip patch. Then I fed him.

I checked that both chips and wrist bands were fully charged. and Put sheps patch on and then mine. It was a nice warm day so I removed all my clothes rather than get them messed up and sat on the sofa. I checked all my settings. I turned my inhibitor up to a point where I was comfortable thinking about having sex with a dog then added another ten percent. I set my submission at sixty percent. Pleasure and sensitivity I set to seventy. I set pain very low I didnt want shep to do me damage because I couldnt feel pain. I set my lust to fifty. And I checked my endorphins were set fairly low. I didnt need to be orgasming every two minutes.

A few weeks ago we had altered the wristbands. There was no transmit button now as if we both tried to transmit at the same time we got feed back. So whoever wore the wristband transmitted. I took my wrist band off once I had completed my settings and put sheps on to check his settings. I left sheps settings where they were from yesterday. I put sheps wrist ban on the sofa and re fitted mine.

I signalled shep to lick me. He was straight in between my legs in seconds. Not sure if he remembered from yesterday or if he was becoming conditioned. After I had orgasmed twice I plucked up the courage to signal to shep to mount me. He placed his feet either side of me and started ramming his dick against me. Then all of a sudden he was in me. It felt amazing. Then he started pumping away in me I very quickly orgasmed this made shep quicken the pace. He started licking my breasts this really made me tingle it seemed to excite him more. Just when I was about to orgasm again something weird happened. I had the buzz in my head the same as when ben had control of me. I looked round and there was bens strap wrapped round his leg. The Velcro must have caught in his fur. I pressed the reset slider but nothing happened. I think the feedback loop in the electronics was overriding the controls. Shep started going crazy we were both connected and transmitting and my orgasm was feeding back to him. I could feel him orgasming. The more he enjoyed it the more I did. I had to get the strap of him before I lost control of him and myself.

I grabbed the strap and started to tug at it. All of a sudden I felt a severe pain. The strap was tangled in his hair and as I caused him pain it amplified back to me. The more I tugged the more tangled it got and the worse the pain was. All I could do was stop pulling and press the strap down till it was comfortable for both of us. Shep had gripped me tight round the chest and as he pulled me to him he was catching the sliders on my side. Every time he rammed in me he would push the sliders to one hundred percent and as he pulled back he would pull them to zero. My head was bursting. As he rammed into me I would get a quick shot of endorphins. II realised I had wrapped my

legs round his back legs and every time he rammed in I would pull him in as far as it would go.

Then we both started to orgasm. Sheps Knot rammed into me I didnt know what that was. All I new was that I was stretched to bursting. the pain was terrible. At least he had pulled the sliders to zero.

Then I felt his semen squirting inside me. My sensitivity was set fairly high and I could feel every squirt. We lay locked together for some time.

Why did I set myself as submissive and him as dominant. We would probably be linked for four or five hours before the chips went flat.

Then shep pulled me off the sofa with his knot trying to pull out of me until we were both laid on the floor. He eventually pulled out and lay at the side of me. Shep decided he needed to lick his sore cock. I couldnt stop myself. It was as if I was him .I crawled over and took his sloppy cock in my mouth. The damp conection between my chip a couple of inches from my mouth and the chip on the back of his neck seemed to amplify our conection. The more that shep thought this felt nice the more I did as well and I tried to ram as much of his cock in my mouth as I could. It felt amazing.. I eventually took all his cock and the furry sheath in my mouth. I couldnt get enough of it.. I dont know how long we lay like that but his cock started to grow in my mouth until it was nearly choking me. I think the self preservation instinct in my brain overrode the pleasure centre and I pulled myself off him and back on the sofa. I tried to clear my head to try to think what to do. If I could get to the computer I could reset both chips. I could barely stand. I crawled over to the computer but I only got halfway before shep mounted me again. As soon as he touched me I wanted him inside me. I turned back to the sofa and lay over it while he mounted me. Oh my god I was orgasming again. and then again. Each time making shep pump faster. I was exhausted and I think I passed out. I think the endorphins must have kicked in while I was out. As I woke as high as a kite to shep still pumping away. eventually we both orgasmed and lay there locked. He eventually pulled out. I lay there for a while trying not to think of licking his cock as this would have signalled to him.

Then I thought Food. If I could get him to want food. I could probably get to the laptop on the way past.

Then he thought Food. I felt the taste of food. I was suddenly starving. He got up and headed for the kitchen and I followed him on hands and Knees, I could hardly stand from the fucking and the endorphins. When I stopped to get the laptop he signalled me to come. I couldnt resist. I got to the kitchen the only thing I could reach was a packet of biscuits on the counter. I rammed two in my mouth but shep knocked the packet away and pushed me to his bowl. I couldnt think straight I was starving. OH dog food. I got a tin from the cupboard and opened it I spooned some into the bowl.

Then shep started eating, I got the feeling that this is favourite, all of a sudden it was my favourite too and I started spooning the dog meat into my mouth. I started cleaning the tin out then I licked the bowl. I opened another tin and we ate that between us. Then he started licking my mouth and I started licking his. He wanted his tongue in me. I opened my mouth and he slid his tongue in licking round my mouth to get the taste of the meat. The conection between my chip and sheps must have only been a couple of inches and the conection was off the charts. Shep seemed to be forcing his tongue as far as possible in my mouth t try to get to the source of the signal. Then he lay on the floor and slept. Thank heaven for that. by the time we wake up the batteries may be flat. Then I slept as well.

Sheps endorphins must have kicked in when he fell asleep as quickly woke up again. When he woke up I started to come round too. I got the feeling I needed to shit and there was shep crouching in the dog litter. I went and knelt at the side of him and did the same. When we had done I realised there

was no toilet paper and I had a dirty bum. Shep must have felt this and started licking me. I got the signal that shep wanted to lick his bum. Oh god no. I couldnt stop myself I crawled down between his legs and until we were in a 69 position and started licking him and he continued licking me. Shep was enjoying the taste of me then all of a sudden I was enjoying the taste of him. we fed back on each other and were licking each other for about fifteen minutes. We were both spotless by the time we finished. Then shep turned round to me and stuck his tongue in my mouth again trying to reach the pleasure signal. and I was doing the same to him. I couldnt think of anything else to think about to distract him .He had slept , had food and water.

I didnt really want another fucking I was exhausted. Looking at the time we probably had another hour left. He lay back down head to toe next to me. I got this urge to put his penis in my mouth again. Not sure if this was me thinking this was better than fucking or if it was shep. But before I knew it I had all his penis in my mouth again. Pretty soon he was hard. Then he started licking me. oh my god he was making me orgasm again and pretty soon he started knotting in my mouth. I thought it would break my jaw. His dick was wedged in my throat I could barely breath. Then I was coming again. this made him start bucking in my mouth then his semen started squirting down my throat. I thought if I could keep him in my mouth another fifteen minutes it would be over. Then I heard a little buzz, I looked up and the light on sheps chip was off. I thought mine would go off shortly. I pulled away from him. The connection between us was gone. I crawled over to the computer and managed switch off the patches then I collapsed half on the sofa. I removed my chip and I think I passed out. As soon as I started to fall asleep the endorphins kicked in and I was wide awake. NO I need to rest. Three times I tried to sleep and three times they kicked in. Oh my god I'm going to end up addicted to the stuff. I went to the computer to turn them off but my chip was flat. I would not be able to reset my base line settings until it had charged. after another half hour it was charged enough to use. I stuck it on the back of my neck and for the time being set everything to normal. I then removed the chip and put it on charge.

Then I finally collapsed on the sofa and fell asleep. Shortly after I was woken by shep mounting me from behind. Oh my god I should have reset him when I did mine. He must have pulled my legs off the sofa and mounted me. He was still set to dominant and he was going to dominate me. He pumped away for nearly an hour. It felt nice but it was just sex. He made me orgasm a couple of times. I think I was too exhausted to do more. When he had done I reset his chip and removed the control strap and locked him in the yard and went to bed.

Part Three

The following morning I was up early. I hadn't slept well. I had had the weirdest dreams all night. I started making breakfast and all I could think of is doing my favourite dog food. Oh my god how long does this conditioning last. I went to the lab to check the reading from yesterday. I tried to concentrate but all the disgusting things I did yesterday kept coming back to me. Thinking about it made me feel ill or that might have just been the dogmeat. I went and got my patch and applied it and slowly turned my inhibition up until I didnt care about the memories. I sat and had a couple of cups of coffee as I checked the readouts.

I hadn't got a proper time out of events but you could see the feedback kick in. Anything set to zero stayed there. But everything else was multiplied as the signal was passed between me and Shep. It went from 20 percent for me to 30 percent for Shep then back to me at 50 percent etc until nearly everything was 100 percent.

I got Sheps breakfast for him and let him in. He came and nuzzled my arm. I dont think he knew

what had happened yesterday. After he ate his food I thought he would try to mount me. But he went and lay on the floor. I noticed his dick was popping out the sheath. I couldn't take my eyes off it. I had the feeling that I wanted to suck it. I knew I was going to have to sort a safe way of having sex with Shep or it would drive me mad. I turned my inhibition to 100 percent and stripped off and went and lay at the side of him. I started playing with his dick and then he started licking me. Then I slid his dick in my mouth. Pretty soon I was orgasming. Sheps dick was hard by now so I went and lay half on the settee. Shep looked a bit puzzled then his memory must have kicked in and he mounted me.

I had a couple more orgasms before he knotted in me. Well that was quite nice but without the connection it didn't satisfy my hunger.

I would have to see if I could alter the control program to make it safe to connect to him again. I set everything I didn't need to zero. I set domination to 60, sensitivity and inhibition to 70 and set lust to 90. I set the endorphins to 10 as I knew that would quickly ramp to 100 but kept the time settings as yesterday. They would wind up to 100 percent but would only be a quick shot now and then (hopefully). I set Sheps the same as yesterday but set him to submissive. I then set the computer to reset Shep after one hour and make him sleep. I charged the chips, I did mine via a long lead as if I took it off I would get the feelings of revulsion again.

I made myself some lunch and re-checked the settings. I put the computer on the table at the side of the sofa and fitted Sheps Patch and switched him on. Then I put Sheps wristband on me so that I could change a couple of his settings if needed. I sat naked on the sofa again and commanded Shep to come. He came straight away but he seemed nervous. I got him to lick me but he wouldn't mount me. Looking at the readings he didn't like being submissive. After all he was a guard dog. So I changed the computer settings to make the submissive slider into the dominant one. I set the slider to about 20 percent and commanded him again. He was straight on top of me fucking me to a couple of orgasms and he then pulled out of me and lay on the floor. I found I could speed him up or slow him down I could turn his dominant slider to one hundred but it didn't change anything. But again there was no connection. Shep was just about to mount me again when the computer kicked in and Shep pulled out and went to sleep. So that works anyway. Feeling fairly satisfied I had a shower and got dressed.

I knew I was going to have to put in the settings we had if I was going to be satisfied. I turned off the urge to eat drink shit I didn't want to be licking his arse or eating anymore dogmeat.

This meant I didn't have a diversion option but it was only going to be an hour so I would be ok. I felt very nervous I was about to give command of my body to a dog. I set Shep to 100 percent dominant and myself to 100 percent submission and I set our inhibition to 100 as well. I checked that everything was charged and then reset the computer timer. I put my wristband on and then strapped Sheps on being careful not to trap his fur.

I sat on the sofa deciding whether to go ahead with it or not. Finally I pressed start on the computer.

My chip was still switched on and as Sheps booted up I got that familiar buzz. Shep came straight over to me. I think he remembered the buzz from yesterday as we connected. As he approached me I got the urge to part my legs. I spread them and the urge was still there and I parted them as far as I could. Then his tongue was inside my lips then the first of the feedback started and I orgasmed within seconds, Shep was licking away feeding off my pleasure. As I orgasmed for a second time Shep mounted me his dick ramming against me until it finally found its mark the wet connection between us once again amplified the feedback and I started coming again. I got the feeling that Shep was thinking he owned me which I suppose he did. He pumped away for a few more minutes then he

started to lick my lips followed by the urge to open my mouth. Sheps tongue was forcing its way to the back of my mouth to reach the source of the pleasure. Then I found I was doing the same then I felt the feedback kick in again and as Shep pumped into me I felt a squirt of endorphins each time he rammed home.

I managed to glance at the computer screen and everything was off the chart. I was as high as a kite again. I couldn't get enough of him. Oh my god I was orgasming again and I could feel Shep knotting in me. Then I felt his semen squirting inside me. Then I collapsed. I felt myself passing out with Shep still locked inside me. I knew I wouldn't get another endorphin shot for over two minutes.

When I eventually came round with a jolt as the endorphins kicked in. Shep was laid on the floor and again he had dragged me with him. I half expected to get the urge to lick him again. With the feedback connected Shep got this thought and echoed it back to me. The signal bounced back and forward being amplified all the time until I couldn't fight the urge and slid over and took his cock in my mouth again. The more I licked and sucked it the more we both enjoyed it. I must have laid there sucking him for at least ten or fifteen minutes. Then he started to get hard again. I got the urge to fuck again. I crawled up and started to climb on the settee. I had only got halfway when Shep mounted me again. As soon as I felt his dick stretching my insides I started to orgasm. Then Shep pulled out and went to sleep.

Shit I am going to have to do something about that for next time.

Oh God I'm already thinking about the next time.

I reset my settings except for the bit of inhibition to keep the memories of yesterday at bay. I then connected my patch to the charger via a long lead to charge it. I didn't want to remove it any more than necessary.

I connected Sheps patch to the computer via one of the long usb leads to monitor his baselines and switched Sheps patch to sleep for a couple of hours. He would also re charge from the laptop. I removed both of our control straps. I realised if we were both going to be transmitting we didn't actually need them. I could do that globally from the laptop. As long as I set a cut off time I would be fine.

I decided to alter some of the back ground settings on my chip to see if I could put in some extra safety measures. I removed my lead from the charger and plugged it into the laptop.

"POP" all of a sudden there was a flash inside my head. I was connected to Shep then I felt the sudden urge to sleep. I couldn't think what was happening. I quickly pulled the usb lead out of the computer just in time. I was about to fall asleep. we would still be asleep when Ben came back or starved to death. I had to think of how I was going to put a safeguard in.

I couldn't send the sleep command to Shep or it would feed back to me and I would sleep.

I made some dinner and had an early night.

The next morning after breakfast I woke Shep and fed him and put him in the yard.

Then I sat looking at the charts from when we were connected via the computer. The only way I could think to disconnect us was to send a 100 percent food signal and make sure the usb leads would not reach the kitchen. I turned the laptop round with the usb ports facing the kitchen and shortened the leads so that they pulled out about halfway there. I found a couple of flat batteries to put in the patches. The usb lead would power them but they would soon run flat when we

disconnected.

I changed the software to allow dual transmitting and put in the food call after thirty minutes. I put both patches on us connected both usb leads to the computer and pressed start. The buzz started as usual then there was a flash of light in my head. It felt as if I was Shep and me. I assume he was the same. Shep bounded over to me. I think he could tell the difference as well. there was suddenly a strong signal to open my legs I instantly complied stretching to the extreme. Shep looked down at my legs then it was as if I was telling myself to close them. Shep looked puzzled and he repeated this twice more. I think he realised he controlled my body. He leapt up on me and stared in my eyes. It felt as if we were staring at ourselves. I thought he was going to mount me but he didnt.

He had an itchy bum and needed to lick it.

Oh god no

I rapidly had the urge to lick him I couldnt stop it. I lay him on the sofa and stuck my tongue in his bum and started licking him. Then I saw there was some dried poo in his fur. I started tugging at that with my tongue and teeth eventually he was happy that the itch had gone. Then he jumped off the sofa and commanded me to crawl on to it. I lay there then he commanded me to open my legs then he was inside me. I orgasmed as soon as he was fully in me. This started to send him wild. I was just about to orgasm again as he pumped in me when I got the sudden urge to eat. This signal echoed back and forth between us until we couldnt fight it. He uncoupled from me and went to the kitchen closely followed on hands and knees by me. Half way there the leads pulled out and the connection was almost lost. We still had the Wi-Fi signal from each chip but that was not as strong. I started spooning out his dog meat when my battery went flat. I still had the urge to eat and had eaten a couple of spoonful's of the meat before I could stop.

Ok well that sort of worked I would have to put a chain on Shep so that he couldnt get to the kitchen. This would separate us until the chips went flat. I would have to replace the dog meat with something I could eat. I think I was becoming a complete submissive I couldnt wait for Shep to fuck me again. I no longer cared what he made me do.

I disconnected the usb cables to make sure the patches went flat. and got a chain from the garage and locked it to Sheps collar and the radiator. He would be able to reach just past the point where the cable pulled out. I set the computer timer to three hours. I needed to see how I felt with him having complete control. By that time I would have had enough but I wanted him to carry on forcing him self on me. I was turning into a complete slut. I ate a couple of biscuits and had a cup of coffee and checked everything was ready.

I connected Sheps patch to the computer and then mine. the pressed start on the computer.

Once again there was a flash and we were in each others heads. Again Shep came over to me and commanded me to open my legs, then lay down more so that my bum was off the sofa. then when he had adjusted me until I was just where he needed me he made me part my legs.

Then Shep was straight inside me without any foreplay. He looked in my eyes and all of a sudden I could almost see myself. I could almost sense him saying take this bitch then his tongue was in my mouth and mine in his.

Oh god my readings were through the roof as I had my first orgasm and quickly followed by my second. It was driving Shep wild. I could feel my cock inside my vagina. I could feel my semen squirting inside me. The endorphin dose was far too high I was as high as a kite I could feel Sheps was too the feeling echoed back and forward between us I thought my head was going to explode.

We continued fucking for about an hour then he had me lick his cock again until he was hard.

This went on for another hour then all of a sudden there was a flash and a bang. It felt like lightning had hit the house. Shep was very shaken by this and the terror started feeding back driving Shep wild. I thought he was going to fuck me to death.

Shep continued using my until it was getting dark. In my foggy state it took me a while to work things out. The computer should have stopped us by now. I think the lightning had crashed the program. I could see the power was still on.

Fuck. I still had at about 12 hours or more with Shep before Ben came home.

Oh my god Shep will kill me.

Part Four

Shep had been fucking me almost non stop for a five hours. I was starting to lose consciousness I think the endorphin limiter had blocked any more which was the only thing that had kept me awake. Every time I was awake enough to try to think of a plan he would fuck me again or make me suck him. I couldnt pull the lead from my patch or my batteries would go flat and he would probably still keep fucking me while he was powered up. I tried to pull his off but the lead was stuck under his medical patch and every time I tried to pull it off we both ended up in agony as it pulled his fur.

Whenever I tried to crawl to the computer he would mount me.

I tried to think of food but my signal was not strong enough to get through as all his baselines were probably off the charts. I tried to pull his lead out of the computer but the computer was the wrong way round and it just jammed it tighter in. Then shep had mounted me from behind and wedged my head under a cupboard. As he banged away I saw a pair of scissors on the floor underneath it. I managed to reach them and cut his cable there was a sudden flash in my brain as we disconnected. He still carried on for about 20 minutes until his battery went flat. I managed to get to the computer and reset us both via the wI fi, I realised shep wouldnt reset as his battery was flat. I managed to drag myself up and put shep outside. I Then took the computer upstairs and set myself to sleep for 8 hours.

I woke and went down and had breakfast and several cups of coffee. I cleaned up and threw the cut lead in the repair bin and let shep in and chained him to the kitchen radiator and fed him. I plugged him in via the good lead and reset him.

As bad as it was I knew I would never be satisfied with sex without the direct conection ever again. I had to try to work out how to safeguard myself. We had a powered usb hub and I found an unused plug in timer in a kitchen draw. If the power went off to the timer it would go off to the hub. I repaired the long cable and set everything up.

I did myself some lunch and got everything prepared when there was a phone call from ben. He wouldnt be back until this evening. Ok that gives me time to experiment. My god I was becoming a right dog slut.

I taped the lead to sheps collar and made sure it was not under the plaster just in case I needed to unplug him. I connected us both to the hub and connected the computer via the wIFI and switched the computer timer to 2 hours in case the mains timer didnt work. I set the mains timer to one hour.

Then I switched the socket on. We would now be directly connected with no interference.

It took a few seconds for both chips to get up to power then POP and a flash of light in my brain and we were connected.

Shep was straight over. He stood there making me open and close my legs to check that he had complete control over me. I tried to resist. I even tried crossing my legs but I couldn't. My legs went exactly where he wanted them. He stood over me as if to say I'm going to fuck you senseless again whether you like it or not. Then he backed off me and started ramming at me really hard. I don't know if he was proving a point or what. But then he was inside me and I was orgasming almost straight away again. Then he made me wrap my legs round behind him and pull him all the way in. Oh my god I was coming again. Then my mouth opened I didn't even get a command to open it. His tongue rammed all the way in until I was nearly gagging. Then my hands were behind his head pulling him in as far as he would go. I definitely wasn't doing that. My hands were turning his head side on to mine and he opened his jaws as far as they would go. I thought he must be leaving bite marks on my cheeks. Then he was licking the back of my throat. I really started to gag then somehow he stopped me from gagging and he continued licking right into my throat. Somehow shep had learnt to completely control me. It must be that his brain was more primitive so certain functions were more powerful than mine. Then he knotted in me. I could feel his semen squirting inside me. Then I came again. We lay knotted for some time with his tongue still in my throat. Then he pulled out and lay down. All of a sudden I was on my knees crawling over to him and placing his sloppy dick in my mouth.

This was getting weird I was not even getting the urge to do things. I was acting like a remote control robot. We lay there for nearly half an hour until he was hard again. Then I got up and lay over the sofa and opened my legs as far as they would go. Then he was inside me again pumping away. I had had one orgasm and was about to have another when the connection went a bit dull. The mains timer had kicked in. the usb hub was still connecting us but were no longer charging the chips. With the connection not being so strong I was able to finish my orgasm before the chip died. Well I thought that worked well but shep would not stop until he had finished it was another fifteen minutes before he knotted and pulled out.

I dragged myself up onto the sofa exhausted. Wow that was probably the best sex I have ever had. Shep owns me and he knows it. Then shep stood up over me and planted his big paws either side of me. He stared into my eyes. I think he was puzzled why he couldn't control me. Then he went and lay down and slept

I went to the computer and pulled out my lead and powered up shep's lead and reset him and put him to sleep. I then disconnected shep and connected myself and reset myself.

That would have to do for now. I tidied up and sponged the sofa. Mental note get some towels for next time.

I wasn't sure how much I would tell ben when he got back.

I spent a few hours trying to find the signals that gave shep control over me but I couldn't find anything in the channels we monitored.

Ben's time away while sue plays.

I had been doing some mods to the basic chip design and the computer guy had done a complete redesign. He still thought the chips were to control computers. The new design was exactly what I wanted it looked like a very thin usb stick coated in silicon rubber with a thin lead trailing from it.

The pins were silicon covered apart from the last one millimetre.

I had ordered fifty as this gave me a good discount.

I had also been on line looking for a dodgy cosmetic surgeon who did liposuction. I found three, one of them was in her early twenties. I made an appointment to see her. She didnt seem over bright which was fine. I convinced her that I had early onset motor neurone disease and I needed an implant to allow me to communicate with a computer when it started getting bad. I plugged my chip into my laptop and demonstrated the existing device to convince her. I told her that none of the normal doctors would do it. I offered her five thousand pound.

She thought about it for about five seconds and said yes. I showed her the area just below the neck where I wanted her to remove some fat and place it and I wanted her to suck out a small run of fat below the skin to allow the cable to pass under my shoulder blade to my under armpit area.

the next day I was on the operating table. I had set up a camera to record the operation. After a few local anaesthetic injections and a bit of prodding with the liposuction machine she had done.

Are you sure you want to implant this she said. Yes pull the lead through first and see if that feels ok. after a bit of manipulation the lead went through ok and there was no sign of it. It was covered in the same stuff they make breast implants from so it should be ok.

Ok I am going to have to open the lipo opening a bit to get the implant in. There might be some blood.

Ok. I had explained to her how it needs to be fitted in line with the spine allowing the pins to be just clear of the bony area. When it was in I reached round and made sure it was in place and pressed it in. It felt pretty painful as the pins dug in then it was ok as the pain relief kicked in.

Ok thats it done. I will Just clean you up a bit.

I stood up and moved my arm and shoulder. It felt fine. I hooked it up to my laptop and everything looked ok. I got her to sit at the desk as I operated the laptop. This chip seems a lot smoother than the old one.

Wow thats cool. she said

Do you want to have a go.

I am not sticking one of them in my body.

You dont need to you can use the old external ones.

OK Then what do I do.

Nothing just sit there and I will press the chip against your neck.

I hooked the chip to the computer and when it powered up I set her settings to Submissive and no inhibitions and slightly high sensitivity. Luckily the settings were not labelled as such on the screen. I then pressed the chip to her neck. POP. Wow the direct conection was very strong. It felt like I was in her head.

Ok try thinking of " the quick brown fox jumps over the lazy dog" over and over.

A stream of letters were coming up on the screen. It had taken me and sue two weeks of calibration before we could type.

I thought the chip had had time to take over control. I leant down and kissed her neck. She suddenly turned round and then turned back to the screen and tilted her neck for me to continue kissing. I then reached down and cupped her breasts.

Mmm thats nice.

I undid her blouse and removed it followed by her bra. Nice tits I thought.

I started to slide one hand down her stomach and between her legs. She opened her legs to let my hand in.

I stood her up and removed her skirt and knickers. I didnt want to break the connection so I leant her over the desk. She had opened her legs as far as she could to lower herself onto the desk. I slid my dick in her and started pumping away. She quickly orgasmed and then twice more before I had done. I never bothered asking if she was on the pill I just came inside her.

Well that was very nice you clearly enjoyed it.

Yes I did I dont know what came over me. I never do that with anyone straight away.

Well we must meet up again soon.

Yes please.

I will see how this implant goes, if all is well my sister will probably want it doing as well.

I removed her chip and unplugged them from the computer.

I hope you have not kept a record of this operation as it might be somewhat illegal.

No I dont record cash transactions as the taxman doesn't need to know.

I knew her settings would remain for an hour or so after disconnecting.

Do you fancy another go before I leave.

I would love to.

She led me through to another room where there was a bed. I sat her down and lowered my trousers. Just pop this in here I said pressing my dick to her lips. She sucked hungrily on me until I was hard again. I lay her on the bed and slid my dick in her. I gave her another couple of orgasms again before I had done. She looked a bit puzzled as without the conection it was just sex and her conditioning was wearing off.

Afterwards I got dressed and said I will see my own way out. She stood there naked and somewhat puzzled as I kissed her and left.

Part Five

It was getting dark by the time I got home. I pulled into the garage and walked through to the kitchen. Sue came to meet me and gave me a hug.

Hi Babe I see you have been enjoying yourself while I was away. She went bright red.

What do you mean.

I have kept my eye on you via the security cameras.

Oh my god no. What did you see.

Its ok I did wonder if you would try to hook up to shep. How was it.

Oh No I dont like to talk about it.

Turn your inhibitions up a bit. So you can talk to me.

Oh no can we just go and fuck.

Ok then we will talk.

I need to show you something. Grabbing the USB hub and heading upstairs.

We got to the bedroom. I need to show you something too. I took my shirt off and showed her where my implant was.

Wow thats cool did it hurt.

No. Now what do you want to show me.

Sue plugged the USB hub in and plugged her cable in and passed me a cable. She then hooked up the laptop. She set herself to the settings she had with shep. Completely submissive. She tried to check my settings but could not.. The new chips were a different configuration. My settings are always set dominant in the firmware.

Ok I'm powering it up. There was a POP and a flash in our heads. OK shep can completely control me when I am hardwired to him can you see if you can.

I tried to command her to lie down which she did. Then stand up which she did.

No thats not it. you are sending me commands that I have to act on but shep makes my body do things I dont know he is trying to do. He can move me anywhere make me do anything he wants. Can you fuck me to see if thats the same.

I made her sit on the bed and suck my cock which did feel more heightened than before. Then I made her lie down and I fucked her. I managed to make her orgasm twice. We lay together for a while talking about what she had done. She said that she nearly lost control of shep.

I know I was watching you. I nearly came back. Then I saw you were ok.

The sex did seem a bit extra special but not to the extent she described.

Ok lets unplug ourselves and look what's happening in the morning.

We were up early and had a leisurely breakfast and got everything ready to connect sue and shep. We brought shep in and fed him. He saw the cables and got quite excited. Sue stripped naked and put her chip on then we put sheps on. As soon as they booted up I could see that sue was no longer conscious of me. I could see her opening her legs for shep and he was about to mount her. I was so intent on watching them that I took my eyes off the screen. I decided to unplug them both before he mounted her.

What the fuck I was just about to fuck.

I know I need to see what happens when he takes over you.

This time I concentrated on the screen as shep mounted her. I continued scanning the channels to look for any new signals until shep finished and sue had had a couple of orgasms. then I switched them off.

Shep was starting to look a bit pissed off.

Ok how was that.

Nice you must try it she said laughing.

Sue came over naked and sat down with me at the desk to see what I had found.

There are just a couple of channels that are the feedback from you that raise by about ten percent at most. Looks like shep is picking these up and amplifying them back to you. They are the muscular feed back that allows you to grip things lightly or tightly. Somehow if he echoes these back he controls how much or how little you move.

Why didnt your chip work.

There must be a compatibility problem. The chip is based around a different processor. I think I will need to put the new chip in Shep and try again.

As long as we can always go back to the old chip.

Are you enjoying the sex better with the new chip.

It is better but its the feeling of being used and not being in control of your own body that excites me. If sheps enjoying something then I enjoy it even more and it echo's round and round until we are both at 100 percent.

What have you done with my shy little Sue. Ok lets get shep on the bench.

I set sheps pain threshold at 100 percent and set him to sleep. I put him on the workbench and carefully made an incision in the back of his neck and carefully slid the chip in. We could leave the cable sticking out for now. I stitched him back up with some fine fishing line and then covered it with a sticking plaster. We cleaned him and the bench up. there had been a bit more blood than I expected.

We left a loop of cable and taped the rest to his collar for now.

We woke shep up and gave him some food.

You ok to try again sue.

Ok.

Again we hooked them both up. Shep was straight over to Sue and mounted her.

That's not the same as before. Can you disconnect us I don't want to lay here in front of you getting mounted by a dog.

I switched them both off but shep was still keen to mount Sue so I took him outside.

I could try connecting to him and see if my chip is compatible but I don't really want him mounting me. How do you feel about getting the implanted chip.

Let me think about it for a bit.

Let's tape the new chip to the back of your neck. The pins are designed for internal use but they should be ok.

Sue turned away from me and lowered her head. I applied the new chip and pressed it in fairly hard and stuck some Elastoplast over it to hold it on.

That was a bit sore.

I brought shep back in and connected them. Once again it was as if Sue was in a trance. Shep quickly mounted her. Sue instantly had an orgasm and proceeded to have four more before he knotted in her. After a couple of minutes he pulled out and lay on the floor. Sue was about to crawl on the floor and put his dick in her mouth. I switched them off and dragged Sue away from him.

Whoa that was amazing. 100 percent better than the old chip. I think I will need to get the implant done. Is there any chance of getting some more test subjects. Do you think we will be able to get people to sign up for this.

I don't think so but I do know someone who is fairly compliant. I told her about the cosmetic surgeon girl. You know we will be keeping her here against her will.

Not really. When we get her implanted she will not want to leave.

Wow what has happened to my innocent little assistant. I couldn't tell her I was all for the idea.

So I went into town and got a new pay as you go phone and sim and phoned her to make an appointment. When she realised it was me she booked me in for the next day. She obviously didn't want to turn down another five thousand pounds.

The next morning we got up early and drove the 80 miles to her office.

Beci and I quickly had Sue on the operating table and did the implant. We plugged her in and checked everything was ok.

Wow that feels smooth she said as she typed on the screen.

Can you stay a bit longer today Beci asked. Just as I pressed the chip to her neck and she passed out fast asleep.

We both lifted her onto the operating table and followed what she had done. We had the video of my operation in case we were stuck. When we got the cable through to her arm pit I also put a small

phone battery connected into her cable. This would keep her charged up for up to 4 days. I didn't want to keep her wired up all the time. I removed the old chip from her neck and booted up the new one.

I was just adjusting her settings when she started to come round.

What are you doing. I don't understand.

Shush go back to sleep. And I sent her to sleep.

Beci's car was parked at the back of her office. We collected up all the equipment we would need and her computer and the five thousand pounds, and some spare clothes she had. We woke her up she looked very puzzled we had her settings as totally submissive. I walked her out to the car while Sue went to get our car. We drove out to a quiet parking area in a woodland and transferred everything to our car we set her to sleep so that she wouldn't know where we were going and drove home.

We woke Beci and led her to the lab and sat her on the sofa. We plugged her and shep in and watched what happened. He came over to her and had a sniff, then he stared at her for a while then Beci opened her legs and shep was about to mount her, he hadn't really worked out that she was clothed. We switched them both off and made some food.

We set Beci to hungry as she still looked somewhat puzzled.

What am I doing here. What's going on.

Sue said you are here to help us with our experiments.

What experiment. I have to get back home.

All in good time. Do you have a boyfriend.

No.

Beci started eating. Sue set her pleasure up by 20 percent to make her associate eating with pleasure. Sue would slowly program her to enjoy being here altogether.

We sat Beci in front of the TV and went in the other room.

Do you want the three of us to share the bed.

Ok if you want can you handle two of us.

I thought you might help out with her.

I don't know I will probably need to go on line to see what girls do she said laughing.

I want us both to enjoy her before we let shep have her.

Part Six

Me and Sue went back in to Becci. I took a beer in for her and sat beside her. I put my arm round her while we watched a film. After another beer I lowered my hand to her breast.

Your Sisters watching. We had decided to continue letting her think Sue was my sister.

Thats ok she doesn't mind.

I undid her blouse and slid my hand inside her bra. She reached round and unclipped it.

Thats nice. Can we go up.

We went upstairs. I slowly stripped her off and lay her on the bed. I climbed in the opposite way round to 69 her. Becci was sucking me like there was no tommorow. Then Sue came in and climbed in the bed behind becci.

What's going on why is your sister joining us.

Thats ok you two can have a bit of fun together if you want.

I'm not a lesbian.

Thats ok neither am I.

I commanded Becci to turn over and kiss Sue. She turned to her and I sent commands to both of them to kiss. Soon they were snogging each others faces off. Then I commanded them to touch each others breasts and then between the legs. As the feedback started I felt the need to touch them too. It was very difficult to keep control and not fuck them myself. Then I commanded them to 69 each other. Becci was face to face with me as I watched her from between Sues legs. Her greedy tongue was lapping at sues clit. And pretty soon they were both orgasming. The feedback bringing them to a climax at the same time. I commanded sue to turn round and suck me again. Fairly soon she had me hard again. Becci was staring at me puzzled, probably wondering how she ended up here.

Rather than have her lay there wondering what was going on I commanded her to lick sues bum. As soon as she started I could feel sue enjoying it and soon Becci was too. Sue was wanting to turn over and lick Beccis bum but I held her in place until I came in her mouth. Pretty soon Sue was coming from mine and Beccis licking. When we had done I commanded sue to turn round and I hugged both the girls and we fell asleep. I had not had sex with Becci I wanted to condition her to enjoying sex with Women.

I woke in the morning to find both girls draped round each other. Not sure what they had been up to. I gently eased my fingers between Beccis thighs commanding them to open. She was starting to get moist even though she was still more asleep than awake I slid between her legs and started fucking her. Pretty soon she was orgasming and I could see Sue was starting to come too from the feedback. She leant over and started to kiss her and cup her breasts. Beccis orgasm was quickly followed by two more before I came inside her.

I probably need to check if she is on the pill.

Morning girls. I will leave you here to have fun. Do you take tea or coffee becci.

Coffee please she said just before she stuck her head between sues legs.

We settled into a routine where one or the other of us would take Becci up to bed and do whatever we wanted. I had no real feelings for Becci but Sue was quite enjoying the girl on girl stuff and she would take her upstairs 3 or 4 times a day. Then one day becci took Sues hand and led her up. Sue turned and put her thumbs up to me as if to say she had finally taken her over. Becci did not

understand or care when sue kept plugging her into the router so that they could have extra feedback between them.

So Becci was not surprised when Sue plugged her in while she was sat on the sofa.

Just putting you on charge be back in a minute Babe.

Then sue came into me in the lab.

Switch the monitor on I have just plugged Becci and Shep in. Sue plugged herself in and activated both chips.

Lets see if Shep can get her undressed.

Shep came over to her and sniffed at her and made her open and close her legs. Then he started licking at her knickers. Becci looked as if she was getting aroused but didnt make a move to remove her clothes.

I am just sending a signal for becci to strip and see if shep remembers the command next time. Surely enough becci stood up and stripped naked.

Sit down again.

Becci sat down and once again shep was licking her. She reached her first orgasm and then shep stood over her and mounted her. She started orgasming again as soon as he was in her.

Ok I will unplug myself now and let shep have control before I end up going in and joining them. Its weird I feel jealous.

Who of

Both of them.

We watched them for a while. Shep was completely controlling becci. He had given her a couple of orgasms and had pulled out and lay on the floor. Becci was crawling over to suck his cock. I must admit we were both getting pretty worked up by now. Sue plugged our leads into a separate hub and lay over the desk.

Come on then big boy. Fucking Sue was always nice. I didnt need to control her now but the feedback always made it nicer. I think she had become a bit of a nymphomaniac. As I slipped my dick in her the feedback started and it felt like I was fucking myself. I reached round and undid her blouse and cupped her breasts. I gave her a couple of orgasms before I came inside her.

When we had done Becci was bent over the sofa with shep mounting her from behind.

I will just give her a bit more endorphins. I want her to associate fucking shep with getting high. You could see the shot of endorphins as she got a second wind and was bucking against sheps thrusts for all she was worth.

When shep had done and was locked in her Sue went in to her.

HI babe I see you and shep are enjoying yourselves.

Oh god dont come in.

Its alright I fuck him all the time. Sue pulled becci onto the sofa with her and connected herself to shep and becci and lay half on the sofa kissing her. She signalled shep to mount her. The three of them connected and Becci could feel Sue orgasming as soon as shep was in her. Sue lay further down the sofa and commanded Becci to straddle her face. She started licking her and the feedback between the three of them sent all the readings off the charts. The two girls had three orgasms before shep was done. Sue didnt even care about sheps spunk dribbling down her face and in her mouth.

Sue disconnected the three of them took becci up to the bathroom where they helped each other clean up.

I was starting to get worried about Sue I dont know if the time she had spent on her own with shep had damaged her mind. She was becoming a control freak. She did seem to care for Becci but she was more interested in her as some sort of lab rat.

The following day Becci was sat on the sofa reading when Sue went in and plugged her in and then shep.

Just charging your chip babe.

Then she left the room and activated both of the chips. Shep walked over to Becci and made her open her legs. Then Becci stood up and stripped naked and lay back on the sofa. Shep instantly mounted her quickly giving her an orgasm.

He has remembered the command to strip her thats amazing.

Sue set Beccis endorphins quite high so that every time she orgasmed she would get high. Then she gave them a couple of hours before she disturbed them. Sue went into them, Shep was laid on the floor with his dick in Beccis mouth. She unplugged them and left the room. Becci came round after a bit wondering why she was sucking the dogs cock. But the more she tried to think what was happening the less she cared and the more she thought of the high she had from fucking him.

Later that day I had a e mail from the computer guy to say he had developed something I might be interested in. Me and sue arranged to go to see him and asked Becci if she wanted to go back home. I had offered her some money for her time she spent helping us but she said for the time being she would like to stay.

It looks like Sues conditioning methods had worked better than we thought they would.

We got to the computer guy and he showed us an add on for the chip. It was a flat card about the size of a credit card but twice as thick. This is a new charger unit. It picks up any radio waves in the vicinity and uses them to charge the battery. if you are a few feet from your router or 2 feet from your phone or a Bluetooth speaker, almost any electronics. Plus the pickup coil is the new wireless comms. Eight times faster than the old one and almost as fast as hardwired. We bought 5 to try out.

Can you get the main chip any smaller yet.

It can go as small as the pin footprint if you want.

Ok we will look at that.

On the ride back we were debating who would try out the new card. Sue was a bit worried as she had been stuck in a room with shep waiting for their batteries to die before he fucked her to death. I

decided we would do shep first along with Becci and see how it performs.

About half way there we saw a young girl hitching.

Where you going.

The Coast

We are going there tommorow I said lying. You can stop the night with us and we will take you then.

OK. Thanks. There are a lot of dodgy people on the roads lately. I always feel safer with a couple.

I looked at Sue and winked. She new what I meant.

Part Seven

After a short drive we arrived home. We found out the girls name was kim. We showed her to her room and went down and prepared some food. We then sat and watched the TV and had a couple of beers. Sue had slipped a sedative in kims drink. She started nodding off to sleep. We attached one of the old chips to her neck and put her to sleep. Sue took kim to the lab and fitted one of the new chips. It was so small we were able to fit it right in to the dip at the base of the skull but still tucked the charger and comms card under her armpit resting on the rib cage so that it would not be noticeable. We kept her asleep for the time being as we wanted her healed over before we woke her. By now I had put becci to sleep and we fitted her with the new chip. We then did shep. Once they were both awake again we put them together in the living room and set shep to be dominant and becci as submissive. Sue and i hooked up to their wifi and switched them on. Shep wasted no time in checking out the new controller and pretty soon he had mounted her and becci was screaming as she had her first orgasm.

We then left them to it as I fitted the new chip to sue. "Hows that feel."

"Fine. I will just hook up to shep and becci"

After a few seconds Sue was becoming quite excited. "Wow this feels the same as being hardwired I can feel the pair of them." " I feel like joining them."

"Not yet youre not. You have to fit mine"

Sue strapped one of the old chips on my spine to control the pain and then removed the old chip and inserted the new one and replaced the old charger under my arm pit. When she had finished and i came round again Sue hooked up to me and switched my chip on.

Wow the connection was really clear i tried t send a command to sue but nothing happened.

"That wont work on me anymore i have set your chip to submissive and I am set as your master." She had swapped the chip that i had given her.

Sue started stripping off and sat on the chair with her legs apart. Without a word i crawled over and started licking her clitoris for all i was worth. Then i opened my mouth as she started to urinate down my throat. When she had finished she turned over and made me lick her arse.

"You're my bitch now and you will do as i want"

She then signalled shep to finish mounting becci. When he was done she put becci to sleep and led me and him to the garden room office and locked us both in. I had no control over my functions at all. Before i knew it i was laid over a stool and shep was trying to mount me. Then my hand was reaching round behind me and guiding his cock into my arse. I dont know what sue was doing to the settings but i could feel shep enjoying what he was doing but i was hating it. I have never felt anything as painful in my life. He must have fucked me on and off for about three hours.

Sue came back out to the office and threw me a sandwich and some water and took shep away and locked the door again. I looked around to see if there was anything i could do to switch the chip off or disconnect it, but there was nothing. Later that day sue came back out with shep and put him in with me again.

“You will need to get used to being fucked up the arse i have set you up a GRINDR page. She showed me her phone.

“Fuck my slave” was the only bit i saw and a photo of me.

Then before she had gone i was laid over the stool again for shep to fuck me. Three hours later Sue came and fetched shep and left me some more food. She had kept my chip switched on and connected to her. She would get the new girl into bed and have her doing anything she wanted and i could feel them enjoying it. It was some new torure she had devised. I couldnt think how to get myself out of this mess. I either had shep fucking me or sue in my head. God knows what she was doing with Becci.

The following day Sue came to the door. “You have a visitor coming to see you later.” “I want you to be on your best behaviour” she said laughing. About an hour later this big fat ugly guy turned up at the door. “your young lady said i can do what ever i want with you”. Sue must have been watching the fat bastard stripped off and came over to me and Sue commanded me to suck his cock. He stank to high heaven but there was nothing i could do to stop myself. Then he bent me over the chair and fucked me. At least i didnt have the stink of his cock any more. After he had done he sat in the chair and made me suck his dick again. This time it stunk even worse. After he had come in my mouth he got up and got dressed. “ See you tommorow bitch” he said as he left. This went on for four days sometimes two a day. Was this going to be my life from now on.

On the fifth night i felt that Sue had switched me off and at last i could think straight. I removed a loose staple from the bottom of the chair and managed to make a small hole under my armpit and was able to pull some of the cable out. It was awkward with only one hand but i managed to strip the insulation off. Then i ripped the cable out of the siide light and as carefully as i could i touched the live wire to the small loop of cable sticking out of my skin. I new there was two possibilities. I either killed myself or fried the chip. There was a flash in my head and everything went black. It was getting light when i came round. I knew i would have to act quickly. I managed to force the door open and went to the house. I knew the toilet window didnt shut properly so i climbed in and unlocked the back door. I found shep he had been fucking becci all night so he was docile. I shut him out the door and went up and burst into sues room. She was still half asleep, i grabbed her round the neck and dragged her onto the floor. I was in no mood to worry about her feelings and i knocked her unconcious and tied her up. It looked like she had put the new girl to sleep until she needed her. She was laid naked at the opposite side of the bed. I must admit she looked beautiful laid there. I felt like grabbing hold of her and fucking her but she could stay there for now. I conected Sue up to the computer and reprogrammed her to be completely submissive and moved her comms chip up between her shoulder blades so that she could not do what i had done to get free. I then put her in the garden room with shep and put a chain round her neck and padlocked it to the bed.

I went and got becci and put her in the bath and adjusted her settings to make her comfortable. I sorted out a new chip for myself and programmed it. Once Becci had finished her bath i got her to replace my fried chip then we went and woke Kim. We went and got some food and discussed what had happened the last few days with Sue.

I wasn't sure what i could do with the Girls, Kim must be wondering what had happened to her. I think Becci was aware that the chips were controlling her but she was happy to go along with it. One thing about sue she was brilliant at conditioning people. I managed to persuade Becci to go back to work for the time being now that the pandemic was over. I told her I would be back to see her from time to time. I transferred some money into her account to keep her going until she got back on her feet again.

I went into town and bought the biggest dog bed there was and put that in the cellar along with a tv and some books. Then i put Sue and shep down there for the time being while i took becci home. I could keep an eye on them remotely to check that they were ok. I got the girls all packed I thought i would take kim to the coast for a couple of days when we had dropped becci off. I took the girls up to bed for one last night together before we took becci home. It certainly looked like sue had done a good job with them both we had an amazing night together the girls took turns sitting on my face and my dick and when i was too knackered they amused each other. Kim certainly seems to prefer girls i lost count of how many orgasms becci gave her. Eventually they fell asleep and it was mid morning before they woke.

We drove over to Beccis office first and unloaded all the gear we borrowed then we took her home. We helped her in with her stuff and then we went to get her some groceries in and made some lunch. I was in no rush to get away think i will miss Becci but for the time being i think she will be better here. I thought that we might at least have a last night of fun so i signalled the girls to kiss each other and then undress and then left them to continue. Pretty soon they had each other naked on the floor 69 ing each other. I lay down behind becci slipping my dick into kims mouth and then into becci. Then after i had given becci an orgasm i moved round behind kim and did the same to her. We then moved up to the bedroom. After about an hour an alarm went off on my phone. I checked the cameras and two men had broken into the house. One of them was the fat bastard who had been fucking me. I knew all the chips and software were safe in my car there was not much of value at home. I watched as they broke into the cellar. Sue was being fucked by shep and the two guys stood and watched till he had done. Then they both made her suck their cocks. Then they bundled her upstairs and started sorting her clothes out making her try on all her sexy bras and underwear. They rammed it all into bags put a coat on her and bundled her out the house along with shep. Me and kim returned home and got an emergency carpenter to repair the door while i went through the camera footage. I removed anything too incriminating and phoned the police and told them that my assistant had been abducted and showed the video of them entering and leaving the house. I had made sure the video was too grainy for them to get an identification.

At least that removed the problem of what to do with Sue. Im sure these guys would have lots of fun with her and keep her fed and housed. We cleared the house out and put it up for sale. I had made a few adjustments to kim and made her very loving and a bit insatiable. By the time the house sold we were inseperable and I decided to take kim traveling to give her a life she could only dream of. I would make sure to take all my spare chips with me. You never know when you might need them.

The End?
